## Professional Summary

Graduated as Big Data and Cloud Computing engineer, with several years of experience as a DevSecOps & Cloud Engineer/Architect. Expert in cloud administration, monitoring, and automation, particularly with AWS, GCP, IBM, and Azure. Proficient in various programming languages and DevOps tools. Open to work for hybride and full remote positions (CDI or Freelance-umbrella/portage).

## Experience

**BNP Paribas** August 2024 - Present *DevOps/SRE - Expert infrastructure et orchestration*

- Manage multi-cloud orchestrators across IBM Cloud, AWS, Azure platforms
- Design and implement scalable, high-availability Kubernetes clusters
- Develop and maintain CI/CD pipelines for microservices architecture
- Implement Infrastructure as Code (IaC) using Terraform and Ansible
- Orchestrate complex data and infrastructure workflows using Apache Airflow, building and maintaining DAGs for scheduled and event-driven pipelines
- Manage incident lifecycle with ServiceNow, automating incident creation, enrichment, and resolution workflows to reduce manual toil and accelerate response
- Lead N3/L3 troubleshooting of production issues across diverse microservices implemented in Golang, Java, Python, and Node.js, performing deep root-cause analysis and remediation
- Defined SLIs/SLOs, monitored SLAs and create incident resolution runbooks
- Develop in-house notification tooling that delivers context-aware, security-driven alerts to the relevant teams based on the security context of each event
- Implement dedicated security pipelines that enforce SAST, DAST, and code quality gates, and run end-to-end testing to improve product reliability and security posture
- Optimize container resource allocation and performance
- Establish and enforce security best practices in cloud environments
- Design and implement robust monitoring and alerting systems using different monitoring tools including Dynatrace, Prometheus, VictoriaMetrics and Grafana stack.
- Automate routine operations and incident response procedures
- Conduct capacity planning and cost optimization for cloud resources
- Implement and manage service mesh solutions
- Develop custom Kubernetes operators for specific business needs
- Lead the adoption of GitOps practices for infrastructure management
- Implement and manage secrets management using HashiCorp Vault
- Optimize database performance and implement data replication strategies
- Conduct regular security audits and vulnerability assessments
- Mentor junior team members on DevOps and SRE best practices
- Collaborate with development teams to improve application performance and reliability
- Implement chaos engineering practices to improve system resilience
- Manage and optimize CI/CD artifact repositories
- Develop and maintain comprehensive documentation for all systems and processes
- Implement machine learning workflows for predictive analytics and anomaly detection on system metrics
- Utilize AI-driven incident prediction models to proactively reduce downtime and enhance system reliability

**Coral-io / Stellantis** Sep 2023 - August 2024 *Cloud/DevSecOps Architect*

- Led strategic migration of thousands of projects from on-premise data centers to AWS and Azure, improving scalability, reliability, and performance
- Orchestrated planning and execution of cloud migrations, coordinating with cross-functional teams and establishing cloud-specific landing zones
- Conducted in-depth risk assessments and compliance checks using AWS Inspector and Azure Security Center
- Engineered robust cloud architectures using HCP Terraform, AWS CloudFormation, and Azure Resource Manager
- Delivered training on cloud technologies and DevSecOps best practices, promoting CI/CD culture
- Managed stakeholder communications, providing frequent project status updates via dashboards and reports
- Implemented and maintained secure CI/CD pipelines across different cloud accounts and environments
- Integrated security tools and implemented automated documentation for IaC
- Managed AWS services including EC2, ELB, RDS, ECS, ECR, Lambda, Route53, S3, CloudWatch, CloudTrail, IAM, KMS, AWS Shield
- Administered Azure services such as Resource Groups, Azure Vault, Disk Encryption Sets, Network Security Groups, Azure Functions, AKS
- Developed detailed migration runbooks to guide each step of the cloud transition process
- Engineered and implemented disaster recovery strategies using Azure Site Recovery and AWS Backup
- Performed regular cost optimization and performance benchmarking of cloud resources
- Maintained strict compliance with data security standards, conducting audits using AWS Audit Manager and Azure Policy
- Implemented multi-account (AWS) and multi-tenant (Azure) strategies for enhanced security and resource management
- Managed Azure SQL Database, Cosmos DB, Azure Blob Storage, and Azure File Storage for diverse data needs
- Developed data-driven dashboards and visualizations using Power BI and AWS QuickSight to monitor migration performance and security metrics

**Coral-io/icade.fr** Aug 2022 - Aug 2023 *DevOps/SRE Consultant*

- Designed, built, and managed CI/CD systems using GitLab CI and Jenkins, ensuring regular deployments
- Containerized web projects based on FastAPI, Django, Flask, Laravel, and Symphony
- Led migration from vSphere to Kubernetes clusters in LXD hypervisors, improving scalability
- Implemented monitoring and logging solutions with Grafana, Prometheus, VictoriaMetrics, Zabbix, Loki, and Promtail
- Managed and optimized databases including Redis, PostgreSQL, Elasticsearch, and MariaDB
- Implemented secret management with HashiCorp Vault and ExternalSecrets
- Configured distributed storage using Rook Ceph, GlusterFS, Longhorn, and OpenEBS
- Developed automation scripts using Python, Bash, and Golang
- Conducted data analysis and automated reporting using Python and Jupyter Notebooks

**Avito.ma / Frontier Digital Ventures** Sep 2021 - Aug 2022 *DevOps/Cloud Engineer*

- Managed AWS infrastructures using Terraform and CloudFormation
- Automated server configuration using Ansible
- Deployed and managed large-scale applications on AWS using Kubernetes and EKS
- Optimized AWS RDS, DynamoDB, and Elasticsearch databases
- Implemented secret management using AWS Secrets Manager and HashiCorp Vault
- Set up monitoring systems with CloudWatch, Grafana, and Prometheus
- Developed automation scripts using Python and Bash
- Created Kubernetes Operators for Traefik IngressRoute and PrometheusRules
- Implemented Apache Kafka for real-time data stream processing
- Integrated machine learning-based log analysis for anomaly detection
- Developed and deployed image recognition solutions
- Implemented object detection using YOLO and SSD models
- Developed recommendation engines to personalize user experience
- Implemented real-time analytics dashboards for marketplace insights
- Enhanced search relevance and item categorization using NLP and machine learning techniques

## Internships

**DXC Technology** Feb 2021 - Jun 2021

*BI-Big Data Engineer*

- Implemented IT Monitoring and Reporting BI Solution

- Utilized: Zabbix, VMware ESXI, Kubernetes, Helm, Docker, Grafana, Elasticsearch, Fluent-bit, Kibana

**ENSET Mohammedia** Oct 2020 - Dec 2020

*AI Software Developer*

- Developed an AI Chatbot using Python (Flask, TensorFlow) on Backend
- Used Heroku for Deployment and React-Native for mobile development

**Abboud Foodstuff Trading** Jul 2020 - Aug 2020

*Full Stack Engineer*

- Designed and developed a web stock management application
- Used NestJS for the backend, ReactJS for the frontend, and Figma for UI/UX

**Barid-Al-Maghrib** Jul 2019 - Aug 2019

*Project Team Manager*

- Developed a furniture management web application using Flask-Python
- Led a team of three developers for a web project using PHP

## Technical Skills

**Cloud Platforms:**

- AWS: EC2, ELB, RDS, ECS, ECR, Lambda, Route53, S3, CloudWatch, CloudTrail, IAM, KMS, AWS Shield, AWS Application Migration Service, Data Migration Service
- Azure: Resource Groups, Azure Vault, Disk Encryption Sets, Network Security Groups, Azure Functions, AKS, Azure SQL Database, Cosmos DB, Azure Blob Storage, Azure File Storage, Azure Site Recovery
- GCP: GKE, Cloud Storage, Compute Engine
- Others: DigitalOcean

**Containerization & Orchestration:**

- Container Technologies: Docker, LXD
- Orchestration: Kubernetes (EKS, AKS, GKE), Docker Swarm
- Package Management: Helm
- Custom Resources: Kubernetes Operators

**Infrastructure as Code (IaC):**

- Multi-cloud: Terraform (HCP Terraform)
- Configuration Management: Ansible
- Cloud-specific: AWS CloudFormation, Azure ARM Templates

**CI/CD & DevOps Tools:**

- CI/CD Platforms: Jenkins, GitLab CI/CD, GitHub Actions, TravisCI, Azure DevOps
- AWS-specific: AWS CodePipeline, CodeCommit, CodeBuild, CodeDeploy
- Deployment Tools: Spinnaker, Octopus Deploy, FluxCD
- Artifact Management: Nexus, JFrog
- Workflow Orchestration: Apache Airflow

**Data, AI & ML:**

- Machine Learning Models: KNN, Linear Regression, Logistic Regression...
- Neural Networks: ANN, CNN, RNN
- Data Pipelines Orchestration: Airflow
- Deep Learning Frameworks: TensorFlow, PyTorch, Keras
- Computer Vision: Image Recognition, Object Detection (YOLO, SSD), Image Classification
- Model Deployment: Docker, FastAPI, Flask, Kubernetes
- ML Operations (MLOps): MLflow, Kubeflow, CI/CD integration for ML workflows

**Monitoring, Logging & Observability:**

- Monitoring: Prometheus, Grafana stack (Mimir, tempo, alloy..), Zabbix, AlertManager, VictoriaMetrics
- Logging: ELK Stack (Elasticsearch, Logstash, Kibana), Loki, FluentBit, Promtail
- Cloud-specific: AWS CloudWatch, Azure Monitor

**Databases & Storage:**

- Relational: MySQL, PostgreSQL, SQLite, MariaDB, AWS RDS, Azure SQL Database
- NoSQL: MongoDB, DynamoDB, Cosmos DB, Redis
- Search Engines: Elasticsearch
- Distributed Storage: Ceph (Rook Ceph), GlusterFS, OpenZFS, OpenEBS, Longhorn
- Object Storage: AWS S3, Azure Blob Storage, Minio
- File Storage: Azure File Storage

**Programming Languages:**

- Scripting: Python, Bash, PowerShell
- Compiled: Go, Java, C/C++
- Web: JavaScript, Node.js, PHP

**Web Technologies & Frameworks:**

- Frontend: React.js, HTML, CSS, Bootstrap
- Backend: Spring (Boot, MVC, ORM, JPA, Hibernate, Data, Cloud), Django, Flask, NestJS, FastAPI, Laravel, Symfony
- Full-stack: Java EE, NextJS

**Security & Compliance:**

- Secret Management: HashiCorp Vault, AWS Secrets Manager
- Certificate Management: Cert-Manager
- Vulnerability Scanning: Trivy, OWASP Zap
- Code Quality: SonarQube
- IaC Security: Tfsec, TFLint
- Cloud Security: AWS Inspector, Azure Security Center
- Compliance: AWS Audit Manager, Azure Policy
- Application Security Testing: SAST, DAST, end-to-end test automation

**Incident & Service Management:**

- ITSM Platforms: ServiceNow
- Incident Management: OpsGenie, automated incident workflows
- Support Tiers: N3/L3 troubleshooting and root-cause analysis

**Big Data & Messaging:**

- Hadoop Ecosystem: HDFS, MapReduce, Hive, Pig
- Distributed Computing: Spark
- Messaging: Apache Kafka
- Coordination: Zookeeper

**Networking:**

- VPN, AWS VPC, Azure VNet
- IP Address Management: PHPIPam

**Version Control & Collaboration:**

- Version Control: Git
- Platforms: GitHub, GitLab
- Project Management: Atlassian Suite (JIRA, Confluence)
- Communication: Slack, Microsoft Teams, Webex
- Incident Management: OpsGenie

**Container Registries:**

- Docker Hub, GitLab Container Registry, AWS ECR, Azure Container Registry

**Virtualization:**

- VMware ESXi, vSphere, Vagrant

**Other Tools & Technologies:**

- Identity Management: Keycloak
- CI Server: TeamCity
- Design & Modeling: UML, Merise
- Search Engine: Apache Solr
- Network Monitoring: Blackbox
- Ansible Web UI: AWX
- Documentation: terraform-docs
- Code Quality: pre-commit hooks

**Methodologies:**

- DevOps, DevSecOps, Site Reliability Engineering (SRE)
- Agile, Scrum

## Education

**ENSET Mohammedia** 2018 - 2021

CS Engineering, Big Data & Cloud Computing

**CPGE - Classes préparatoires aux grandes écoles** 2016 - 2018

Physics and Engineer Science

**Tarik Ibnou Ziad High School** 2013 - 2016
Mathematics Science A

## Certifications

- Hadoop Foundations
- Python: Advanced Level
- Modernizing Data Lakes and Data Warehouses with GCP
- Building Resilient Streaming Analytics Systems on GCP
- TCF - French Advanced level
- Huawei certification Security
- Huawei certification AI

## Languages

French (Advanced), English (Advanced), Arabic (Native)

## Soft Skills

Team Management, Flexibility, Creativity, Patience
